

gx|infra[®]

Comprehensive Infrastructure
Readiness and Optics

GxInfra® is a full-scale end-to-end service that evaluates steady-state data center environments to enhance efficiency, reliability, dependability and security. Leveraging data center infrastructure management expertise, our automated services provide the optics necessary to refine and improve data center performance.

Complete Infrastructure Optics

GxInfra® goes far beyond network discovery and documentation - it provides real, added value intelligence to your IT assessments. Our proprietary data collectors compare multiple data points to uncover hard to detect issues, measure risk based on impact to the network, suggest recommended fixes and track remediation progress.

Key features of GxInfra® include:

- Cross platform functionality
- L2 & L3 network diagram complete with single points of failure and choke points
- Network optimization and benchmarking to draw on regional architecture and DCIM metrics for comparison and rating
- Artificial intelligence (AI) and machine learning (ML) technology enables a reduction in human error
- Fully-automated response to incident mitigation and security remediation allows for faster response times for detection and isolation which allows your network to protect itself without the dependability on human intervention
- Reduced dependence on tribal knowledge
- Elevates roles of service provider staff to: scientists, decision makers, advisors and very often, stewards of key business info, provider of best practices and factory environments
- Reduces headcount, time, cost of delivery: troubleshooting, major changes, risky changes, re-platforming and M&A

100%

visibility and clarity on every network connected device

4X

automated software collection appliances

30+

compliance and governance standards covered

Points of value:

- Increased network protection with less human intervention
- Get more from your infrastructure investment through optimization
- Proactive management keeps your business up and running
